

# Are Your Clients Cyber “InsureReady”?

Help your clients put their best foot forward in today's challenging Cyber insurance marketplace.

It's easy for companies to have their head in “the cloud” when it comes to cyber security. However, cyber losses related to ransomware, social engineering and privacy breaches continue to reach all-time highs. This trend has led to cyber insurance providers increasing premiums, adding coverage restrictions, or outright declining to quote cyber liability for companies that lack basic security controls, such as multi-factor authentication, or have known vulnerabilities.

**That's why Amwins has partnered with ePlace Solutions to provide our clients with access to cybersecurity experts who can advise insureds about the security controls needed to obtain the best cyber policy terms possible.**

As an added bonus, Amwins' clients receive a special discount on this service.

## InsureReady Highlights

This three-month service, called **InsureReady**, offers your clients:

### Unlimited Advice from Cybersecurity Experts

ePlace's cybersecurity experts speak directly with your clients to understand their IT environment and any unique technical/practical challenges faced while trying to implement needed cybersecurity controls.

### Cybersecurity Controls

ePlace will recommend and discuss security measures to minimize risk of cyber-attacks and provide guidance to implement required controls.

### Vulnerability Scanning

ePlace uses a proprietary scanning tool, SecurityVue, to provide safe, external scanning of internet-facing systems and applications to identify public-facing vulnerabilities.

### Critical Cybersecurity Policies and Procedures

ePlace provides a set of the most important cybersecurity policies and procedures ready for customization and deployment in your client's organization.

### Certificate of Cybersecurity Completion

ePlace will provide a certification that (1) ePlace's external scanning shows no exposed, open remote access ports and no high-risk software vulnerabilities, and (2) after understanding the client's technical environment and existing cybersecurity controls, ePlace provided its recommendations on additional controls that, in ePlace's professional opinion, create meaningful barriers to cyber-attacks.

Don't let cyber vulnerabilities leave your clients vulnerable; talk to your Amwins broker about utilizing InsureReady before going to market.
